ABSTRACT

Papers and photographs of Quaker Theodore Hetzel (1906-1990), a professor of engineering at Haverford College in Haverford, Pa. whose interests led him to involvement with Native American and Quaker issues. An avid photographer, the materials in this collection are primarily photographic, as well as correspondence and documents.

BIOGRAPHICAL NOTE

Theodore Brinton Hetzel (1906-1990) was born in Germantown, PA and attended Westtown School and Haverford College, graduating Phi Beta Kappa in 1928. He completed graduate studies in mechanical engineering at the University of Pennsylvania, the Technical University of Munich (Germany), and Penn State University. He returned to Haverford College in 1936 as a member of the faculty and later chair of the Department of Engineering, remaining on the faculty until 1972. While at Haverford, he also served on the Committee of Arts and Service, as a member of the Corporation, on the Eighth Dimension Advisory Committee, as advisor to the Social and Technical Assistance Program. He was secretary of the faculty from 1965-1971.

Hetzel served on the Indian Committees of the American Friends Service Committee and Philadelphia Yearly Meeting. In 1955, the Indian Rights Association asked him to join its board of directors. In 1969 the Association appointed him its executive director and editor of its publication, *Indian Truth*. In 1971 he was named general secretary. Adopted by the Seneca Indians, he was given the Indian name “Our friend.” An avid photographer, Hetzel was a contract photographer for Haverford College for a number of years. His photographs were also used for Friends’ periodicals and for projects with which he was affiliated.

Hetzel was a member of Quaker organizations which worked with Native Americans, perhaps especially AFSC. Among the projects with which he was connected was the Friends Kinzua Dam Project. In the 1950s, the U.S. Army Corps of Engineers planned a dam named Kinzua on the Allegheny which would flood nearly the entire Seneca reservation, but would protect the city of Pittsburgh. However, there was an alternative: by utilizing a naturally occurring glacier hole to create a reservoir, the Conewango dam would produce three times as much flood water at less cost than Kinzua. The Seneca asked that this alternative be investigated prior to final decision, though the Corps of Engineers was adamant. The Friends group worked to alleviate this situation.
